< ∃⇒

э

#### Lemmatization

- Reduce inflectional/variant forms to base form
- Example: am, are, is  $\rightarrow$  be
- **Example:** car, cars, car's, cars'  $\rightarrow$  car

Example: the boy's cars are different colors  $\rightarrow$  the boy car be different color

(日) (四) (日)

э

#### Lemmatization

- Reduce inflectional/variant forms to base form
- Example: am, are, is  $\rightarrow$  be
- $\blacksquare Example: car, cars, car's, cars' \rightarrow car$
- Example: the boy's cars are different colors  $\rightarrow$  the boy car be different color
- Lemmatization implies doing "proper" reduction to dictionary headword form (the lemma).

30 von 57

э

### Lemmatization

- Reduce inflectional/variant forms to base form
- Example: am, are, is  $\rightarrow$  be
- $\blacksquare$  Example: car, cars, car's, cars'  $\rightarrow$  car
- Example: the boy's cars are different colors  $\rightarrow$  the boy car be different color
- Lemmatization implies doing "proper" reduction to dictionary headword form (the lemma).
- Inflectional morphology (<u>cutting</u> → <u>cut</u>) vs. derivational morphology (<u>destruction</u> → <u>destroy</u>)

< 一型 ▶

# Proximity search

 Simplest algorithm: look at cross-product of positions of (i) employment in document and (ii) place in document

< 47 ▶

- Simplest algorithm: look at cross-product of positions of (i) employment in document and (ii) place in document
- Very inefficient for frequent words, especially stop words

- Simplest algorithm: look at cross-product of positions of (i) employment in document and (ii) place in document
- Very inefficient for frequent words, especially stop words
- Note that we want to return the actual matching positions, not just a list of documents.
## Proximity search

- Simplest algorithm: look at cross-product of positions of (i) employment in document and (ii) place in document
- Very inefficient for frequent words, especially stop words
- Note that we want to return the actual matching positions, not just a list of documents.
- This is important for dynamic summaries etc.
